

## BOOSTX EXISTING DESIGN — ADMIN + PAYMENT CORRECTION

Do NOT redesign or change the existing BoostX customer-facing UI.

The customer/user side is already completed and approved.

ONLY make the following changes:

### 1. CORRECT THE PAYMENT METHOD SCREEN

Replace the existing payment method implementation with the payment flow specified below.

BoostX payment account:

Network: Telecel Cash

Account Name: BOOSTX

Number: [0202979378](#)

Add a Copy button next to the number.

Create a segmented network selector:

Telecel

MTN

AirtelTigo

When Telecel is selected, show:

1. Dial \*110#
2. Select Send Money
3. Enter 0202979378
4. Enter the exact amount shown
5. Enter PIN

When MTN is selected, show:

1. Dial \*170#
2. Select Transfer Money
3. Select Other Networks
4. Select Telecel
5. Enter 0202979378

6. Enter amount
7. Confirm the recipient name
8. Enter PIN

When AirtelTigo is selected, show:

1. Dial \*110#
2. Select Send Money
3. Select To Mobile Number
4. Select Other Networks
5. Select Telecel
6. Enter 0202979378
7. Enter amount
8. Enter PIN

Display prominently:

"Send the exact amount shown — any network fee is added on top, not deducted."

After payment, include screenshot upload.

Upload states:

Idle  
Dragover  
Uploading  
Success  
Error

Then show:

Verifying your payment

The verification result must support:

Verified  
Rejected  
Review Required

Verified:

Show detected amount, expected amount, recipient and reference.

Allow:  
Continue to Order

Rejected:  
Show rejection reason.

Allow:  
Upload New Screenshot

Review Required:  
Show that manual review is required.  
Do NOT allow the customer to continue until the payment has been resolved.

## 2. ADD ADMIN DASHBOARD

Create the BoostX Admin Dashboard INSIDE THE SAME EXISTING DESIGN SYSTEM.

Do NOT create a separate visual identity.

Use the existing:

- BoostX logo
- Typography
- Black/white color system
- Light mode
- Dark mode
- Buttons
- Inputs
- Cards
- Tables
- Icons
- Spacing
- Border radius

The Admin Dashboard should feel like the internal version of the same BoostX platform.

Admin navigation:

Dashboard  
Orders  
Payments  
Transactions  
Users

- Services
- Platforms
- Pricing
- Provider Balance
- API
- System Health
- Audit Logs
- Support
- Settings

Admin Dashboard overview:

- Today's Orders
- Today's Revenue
- Pending Payments
- Verified Payments
- Failed Payments
- Active Orders
- Provider Balance

- Add:
- Revenue chart
  - Order activity chart
  - Recent payments
  - Recent orders
  - System health

3. ADMIN PAYMENTS

Create:

Payments

Table columns:

- Payment ID
- Order ID
- Customer
- Network
- Expected Amount
- AI Detected Amount

Recipient  
Reference  
AI Result  
Status  
Date  
Action

#### 4. PAYMENT REVIEW

Create a detailed payment review screen.

Show:

Payment information  
Expected amount  
Detected amount  
Network  
Recipient  
Reference  
Uploaded screenshot  
AI verification result

For Review Required:

Approve Payment  
Reject Payment

#### 5. ORDERS

Admin must be able to:

View  
Track  
Cancel  
Refill  
View Payment  
View Event History

#### 6. SERVICES

Admin can:

Enable/Disable service  
Edit service  
Change customer price  
Change minimum quantity  
Change maximum quantity  
Change refill availability

## 7. PLATFORMS

Only these five platforms:

TikTok  
Instagram  
Facebook  
X  
Telegram

Do NOT add a sixth platform.

## 8. PAYMENT SETTINGS

Create admin payment configuration:

Network  
Account Name  
Account Number  
Payment Instructions  
Active/Disabled

## 9. PROVIDER/API SETTINGS

Show:

Provider API URL  
Masked API Key  
Connection Status  
Test Connection

## 10. SYSTEM HEALTH

Show:

Provider API

Database

AI Verification

Queue/Worker

Storage

## 11. AUDIT LOG

Show:

Admin ID

Action

Object

Old Value

New Value

Timestamp

## 12. MOST IMPORTANT — ONE LOGIN

DO NOT create a separate Admin Login screen.

The existing BoostX Sign In page must remain the SAME login page for customers and administrators.

Do NOT add:

Admin Login

Staff Login

Admin button

Role selector

Account Type selector

The backend will determine the account role after authentication.

If the authenticated account is a normal customer:

→ redirect to the existing customer dashboard/order area.

If the authenticated account is an administrator:

→ redirect to /admin.

The login UI must give NO indication that an admin system exists.

### 13. ADMIN ACCESS

The Admin Dashboard must NOT appear in the public navigation.

There should be no visible Admin link on:

Homepage

Footer

Customer dashboard

Customer navigation

Payment page

Order pages

Admin access happens only after successful authentication and role-based redirect.

### 14. IMPORTANT

Do not change any already-approved customer UI except the payment method section.

Do not redesign the homepage.

Do not redesign the customer dashboard.

Do not redesign the order flow except where required for the corrected payment flow.

Do not introduce new colors.

Keep everything visually consistent with the existing BoostX design.

The final result should feel like:

ONE BOOSTX SYSTEM

with:

CUSTOMER EXPERIENCE

+

ADMIN EXPERIENCE

using:

ONE LOGIN

+

ROLE-BASED REDIRECT

+

SHARED DESIGN SYSTEM.
